

OBJECTIVE

In the next three months, I want to research and identify companies that offer IT internships and start applying to them. I also want to enhance my technical skills by learning a new programming language or software tool.

In the next 6-12 months, I want to secure an IT internship position that aligns with my career aspirations and provides me with hands-on experience. I also want to build my professional network by attending industry events and connecting with professionals in my field.

In the next 2-5 years, my goal is to gain enough experience through internships and entry-level positions to become a proficient IT professional. I also want to continue learning and advancing my skills to eventually become a team leader or project manager.
